

# Stock Buy Signal Prediction

*Presented by: SHIJIN*

# Why Predict Buy Signals?

“The Stock market presents daily opportunities, but manually identifying buy moments is tough, This model aims to automate buy signal prediction”

# Data Import & Libraries

A 3D candlestick chart for the NIFTY 50 index. The chart features green bars representing price movements, set against a dark blue background with a subtle grid. The text 'NIFTY 50' is prominently displayed in a large, metallic, serif font at the top left of the chart area. The chart shows a series of peaks and troughs, indicating market volatility over time.

NIFTY 50

- Historical stock data via  
yfinance(2018-2024)

- Library used:

pandas, numpy, matplotlib, scikit-learn, XGBoost, ta, seaborn, imbalanced learn

# Technical Indicators as Features

1. Indicators: RSI, MACD, EMA, ADX, BOLLINGER Band Width, ADX, CCI, Williams %R, and lag features

# Target Variable

- Defines Target: 1 if next-day return  $> 0.7\%$ , else 0.
- Represents 'Buy' vs 'No Buy' signal.

# Preprocessing

- Defines selected features (X) and target variable(y)
- Cleaned missing and infinite values
- 80/20 train-test-split
- SMOTE used to balance Buy class

# Model Training

- Trains an XGBClassifier with defined hyperparameters

# Threshold Tuning

- Model Predicts probabilities
- Evaluated thresholds from 0.01 to 0.6
- Selected best F1-score threshold

# Classification Results

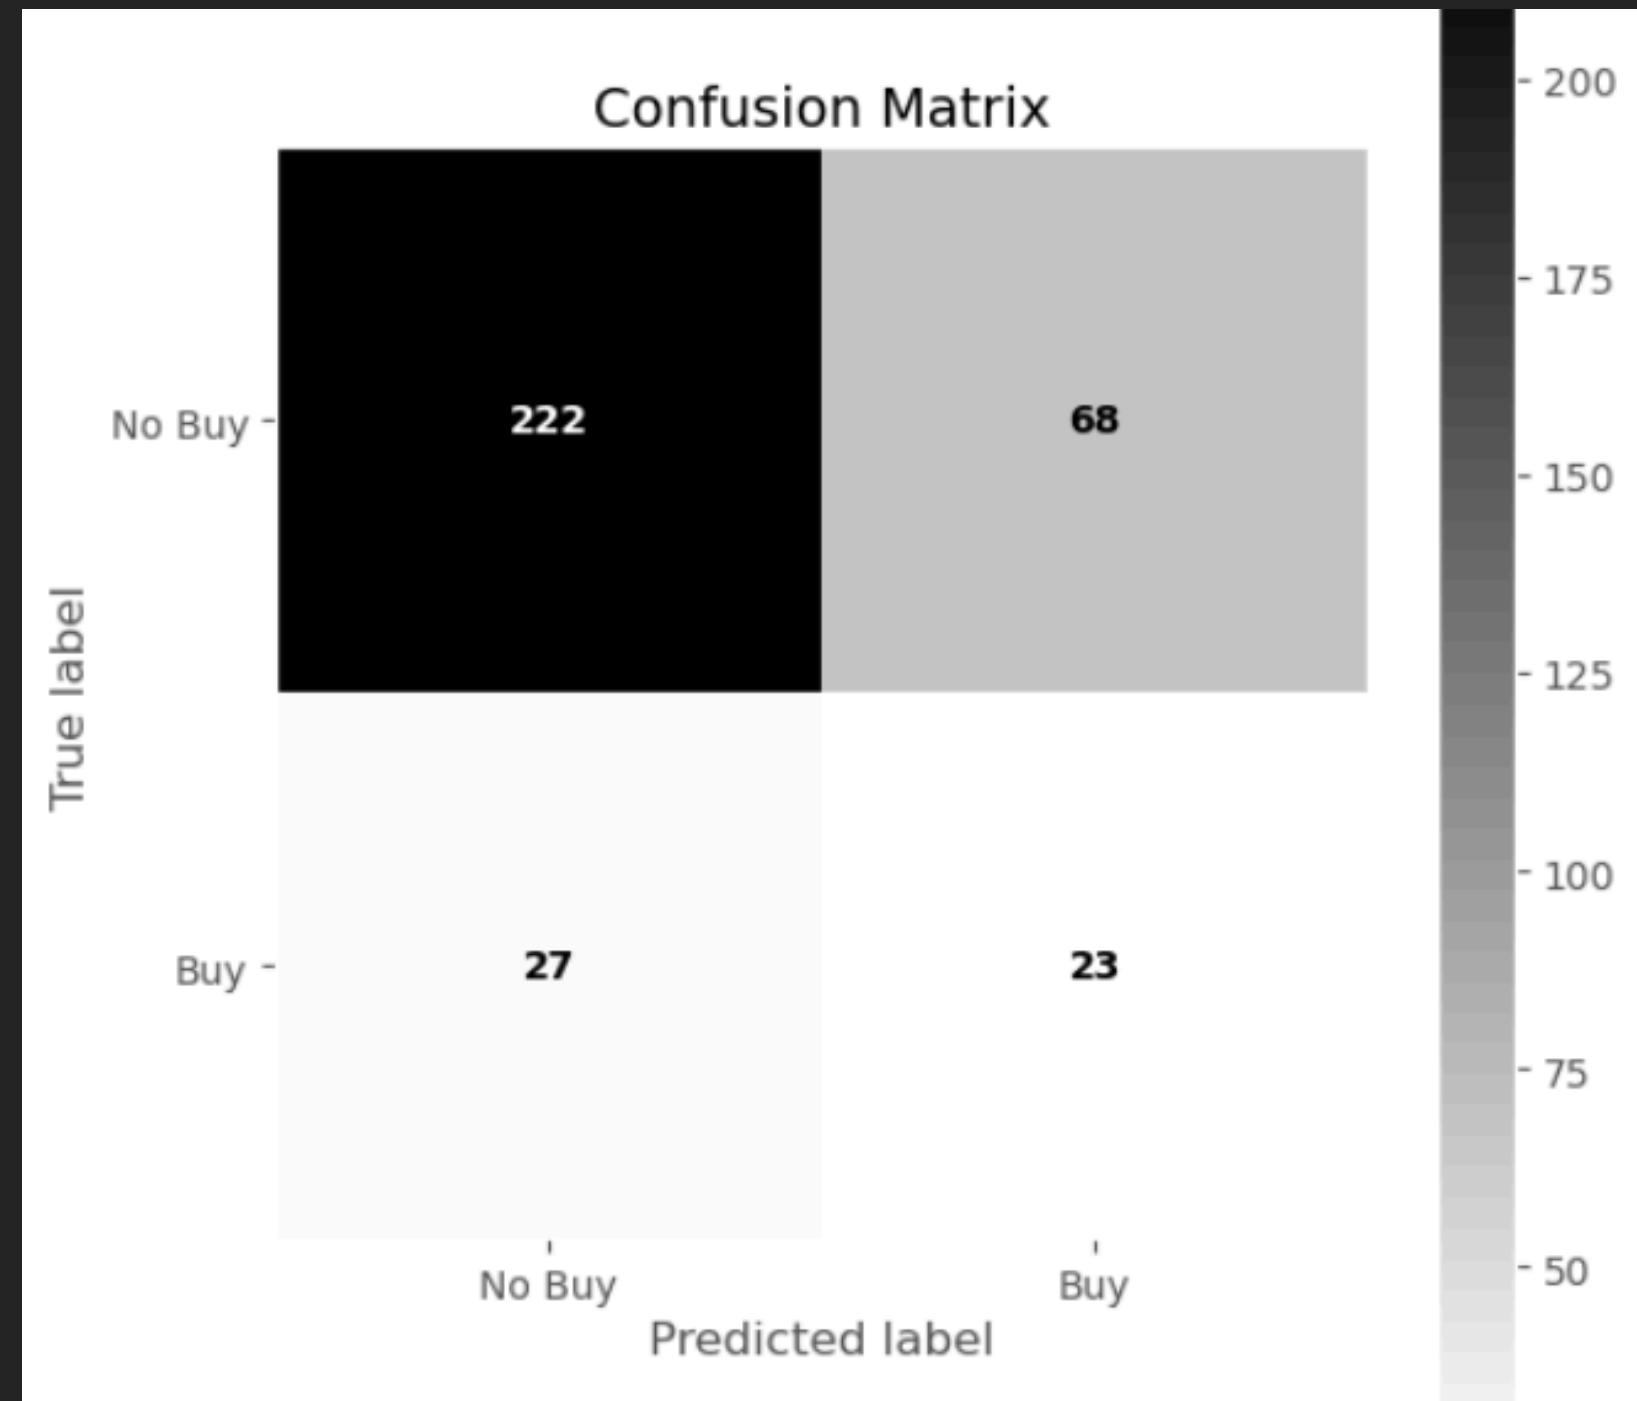

- Accuracy: 72%
- Class 0 (No Buy): Precision 0.89, Recall 0.77, F1 0.82
- Class 1(Buy): Precision 0.25, Recall 0.46, F1 0.33

	Class	Precision	Recall	F1-Score	Support
0	0 (No Buy)	0.89	0.77	0.82	290.00
1	1 (Buy)	0.25	0.46	0.33	50.00
2	Accuracy	0.72	0.72	0.72	0.72
3	Macro Avg	0.57	0.61	0.57	340.00
4	Weighted Avg	0.80	0.72	0.75	340.00

# Confusion Matrix

Strong at avoiding false buys

- TN: 222, FP: 68
- FN: 27, TP: 23

# Buy Signal Visualization

# Learning Outcome

- Built an end-to-end ML pipeline
- Learned SMOTE, XGBoost, and threshold tuning
- Gained insights on stock ML challenges

# Summary

## NIFTY 50

- This model serves as a strong foundation for future algorithmic trading systems. it can be scaled, refined and integrated into live trading setups.
- Next Improvements:
- Use LSTM for time-series memory
- integrate new sentiment
- Add volume trends & multi-timeframe signals

“Thank you for your trust. Analyze  
wisely trade better!”

“Share your thoughts--your input helps me improve!”
